

Business model (value)	What is offered?	To Whom it is Offered To	How it is Offered	Why you Capture Value
Freemium student subscription (primary model)	• Free tier: one course, running on free cloud AI models, with a weekly limit on explanations and quizzes • Pro tier: paid AI models for explanations, picked from the least to the most expensive, plus unlimited courses, voice input, iPad sync and planned review, within a monthly usage limit • What is exchanged is study time saved and better-prepared exams	• Individual undergraduates, starting with U of R students • Graduate and thesis students as a secondary group	• Direct download of the desktop app; App Store for iPad • Campus word of mouth, starting from the design-partner students • Monthly or per-term payment	• Students who study daily pay a small recurring fee • The free tier costs the team nothing per request because it runs on free cloud AI models • Pro pricing and monthly usage limits cover the cost of the paid models students choose • Conversion is driven by the point in the term when review planning matters most
Campus or department licence	• Site licence covering a course, department or faculty • Bulk seats with onboarding and instructor support	• Universities and teaching and learning centres • Accessibility services • Individual instructors who want it for their own course	• Pilot in one U of R course, then expand to the department • Institutional procurement, with instructor advocacy as the entry point • Annual contract	• Institutions pay per seat for retention and accessibility outcomes • One sale reaches many students at once • Predictable annual revenue, plus academic credibility for the project
One-time local licence (bring your own model)	• Paid desktop app that runs on-device, or against the student's own API key • No account required and no server-side storage of course files	• Privacy-conscious students and staff • Technical students with capable hardware • Anyone handling licensed or unpublished material	• One-time purchase by direct download • Student supplies a key or uses the bundled on-device model	• Revenue without per-user inference cost • Appeals to students who will not send any text to a cloud provider, so privacy is the reason to pay • Tests whether students will pay once rather than subscribe
